PROFESSIONAL SUMMARY

AI Automation Engineer and UI/UX Product Designer with hands-on experience building workflow automations, AI-powered systems, and end-to-end digital products. Skilled in n8n, [Make.com](#), Zapier, REST APIs, webhooks, and LLM integrations, with a practical focus on validation, error handling, and reliable workflow design. Complementary product design experience spans UX research, information architecture, prototyping, design systems, and developer collaboration. Business Administration graduate with one year of administrative experience from an NYSC placement.

CORE COMPETENCIES

AI and Automation: n8n, [Make.com](#), Zapier, workflow automation, AI agents, prompt engineering, structured output parsing, error handling, conditional logic, debugging

APIs and AI Services: OpenAI API, Claude API, Google Gemini, Grok, REST APIs, webhooks, JSON

Integrations and Data: HubSpot CRM, Airtable, Google Sheets, Slack, Supabase, PostgreSQL, Pinecone

UX/UI and Product Design: Figma, FigJam, Notion, user research, personas, journey mapping, wireframing, prototyping, usability testing, design systems, accessibility, information architecture, responsive design, developer handoff

Business and Operations: administrative support, records management, documentation, scheduling, workflow coordination, process improvement, stakeholder communication, report writing, Microsoft Office, Google Workspace

PROFESSIONAL EXPERIENCE

AI Automation Engineer (Independent / Project-Based)

2026 – Present

- Built production-style workflow automations in n8n, [Make.com](#), and Zapier, focusing on reliable end-to-end execution rather than one-off demonstrations.
- Integrated AI and LLM services, APIs, webhooks, CRMs, databases, spreadsheets, and communication tools into practical business workflows.
- Applied validation, conditional logic, failure-path routing, run logging, and debugging to improve workflow reliability.
- Built an AI real estate lead capture and CRM automation that ingests Tally submissions, qualifies and scores leads with Google Gemini, syncs qualified leads to HubSpot, sends Slack alerts, and logs successful and failed outcomes to Google Sheets.
- Diagnosed and resolved workflow issues including HubSpot field mismatches, an incorrectly defaulting AI budget tier, and a Set node silently dropping fields.

- Built an AI newsletter automation pipeline that researches, ranks, drafts, and verifies content, routes it through Slack for human approval, then segments and sends via Brevo.
- Built a multi-tenant AI customer support agent with RAG-powered answers, deterministic escalation guardrails, and unified error observability across every failure path.
- Built a [Make.com](#) cryptocurrency price monitoring system that tracks 14 coins every 15 minutes and alerts on significant moves.

UX/UI Designer

Qurexa — UK Healthcare Logistics Startup (Remote)

Jul 2025 – Nov 2025

- Designed the marketing website, admin dashboard, and customer dashboard for a UK healthcare logistics startup in MVP development.
- Collaborated with developers and stakeholders to define information architecture and streamline user journeys across multiple user types.
- Prioritized dashboard usability, visual balance, workflow efficiency, and clear interaction patterns.

Administrative Officer

National Youth Service Corps (NYSC) — Air Force Institute of Technology

Jun 2025 – Jun 2026

- Provided administrative support to departmental staff, including correspondence, records, documentation, and day-to-day operations.
- Coordinated scheduling, filing, and information flow between departments to support timely completion of institutional tasks.
- Prepared reports, memos, and official documents while maintaining accuracy and confidentiality of institutional records.
- Supported process and workflow improvements that contributed to more organized administrative operations.
- Liaised with staff and visitors to address inquiries professionally and support effective communication.

SELECTED PRODUCT DESIGN PROJECTS

FunLearn — Gamified Learning Experience for Primary Pupils

UX/UI Designer | Dec 2025 – Jan 2026

- Designed a goal-driven mobile learning experience enabling pupils to practice curriculum topics while parents track progress and performance.
- Mapped product flows from onboarding to goal completion, integrating structured lessons, quizzes, rewards, progress dashboards, and feedback systems.

Trip AI — AI-Powered Travel Planner

UX/UI Designer | Feb 2025 – May 2025

- Conducted user research and interviews with frequent travelers to identify gaps in personalization and cultural context.
- Created journey maps, wireframes, high-fidelity prototypes, and a minimalist design system for flexible mobile itinerary planning.

- Reduced itinerary-creation time by 60% in prototype testing and received strong feedback for clarity and usability.

CERTIFICATIONS

- **No-Code/Low-Code AI Automation Bootcamp — Loubby AI in partnership with Diverse Labs | May 2026**
- **UI/UX Product Design — 3MTT Nigeria in collaboration with NITDA | Dec 2025**
- **Complete Mobile and Web Design, UI/UX, HTML, and CSS — Udemy | Mar 2025**

EDUCATION

B.Sc. Business Administration

Ibrahim Badamasi Babangida University, Lapai, Niger State
